**A. Project and Sponsor Information.**

Name of Action or Project: Freese Road over Fall Creek Bridge Replacement (PIN 3756.41)		
Project Location (describe, and attach a general location map): Town of Dryden, Tompkins County		
Brief Description of Proposed Action (include purpose or need): The Town of Dryden is seeking to replace the Freese Road Bridge. The Freese Road Bridge (BIN 3209800) was constructed in 1920 and is a two span, 166 foot long structure. The existing structure shows signs of deterioration along the transverse floor beams, the longitudinal stringers, the diagonal cross bracing, the steel grate deck, and steel curbing. Currently the bridge is load posted for 15 tons due to the deterioration of the steel truss members. Additionally, the existing structure does not meet several NYSDOT Bridge Manual requirements, and a bridge rehabilitation will not address these requirements. As a result, the proposed project alternative is to completely replace the existing truss. The new bridge will be designed as a single span crossing Fall Creek. It is anticipated that the proposed superstructure would be multiple steel girders with concrete deck. The substructure and stream bank geometry would be sized to follow the stream channel with a more natural opening using integral abutments supported by steel piles. Horizontal and vertical alignments will remain with approximately 150 feet of approach work to occur on either side of the bridge.
