The **Consultant** will prepare for and attend all meetings as directed by the **Sponsor's Project Manager**. Meetings may be held to:

- Discuss all project issues, objectives, etc. with Sponsor (a 'kick-off' meeting).
- Present, discuss, and receive direction on the progress and scheduling of work in this contract.
- Present, discuss, and receive direction on project specifics.
- Discuss and resolve comments resulting from review of project documents, advisory agency review, and coordination with other agencies.
- Preview visual aids for public meetings.
- Manage subconsultants and subcontractors.

The **Consultant** will be responsible for the preparation of all meeting minutes; the minutes will be submitted to meeting attendees within one (1) week of the meeting date.

The original agreement included 6 meetings. A total of 12 meetings were attended by the Consultant.

### **Section 3 - Preliminary Design**

### 3.02 Development of Alternatives

The **Consultant** generated 15 different alternatives and numerous construction cost estimates for the alignment of the trail to limit impact to property owners and reduce construction costs.

### A. Selection of Design Alternative(s)

The **Consultant** will identify and make rudimentary evaluations of potential design alternative concepts that would meet the **Sponsor's** defined project objectives. These evaluations are not to be carried beyond the point of establishing the feasibility of each concept as a design alternative; only those significant environmental and geometric design constraints that bear on the feasibility should be identified.

For each concept the **Consultant** will prepare rudimentary sketches of plan, profile, and typical section views which show:

- On plan: proposed centerlines; pavement edges; curve radii and termini; and existing ROW limits.
- On profile: theoretical grade lines; critical clearances; vertical curve data; grades; and touchdown points.
- On typical section: lane, median, and shoulder widths; ditches; gutters; curbs; and side slopes.
- Where necessary: important existing features.
- Where pertaining to feasibility: significant environmental and geometric design constraints, labeled as such.

These sketches will include only the minimum information needed to select design alternatives to be studied in further detail.

The **Consultant** will meet with the **Sponsor** to discuss the concepts, using the sketches as discussion aids to describe the relative order-of-magnitude costs, advantages, disadvantages, and problem areas of each. From these concepts the **Sponsor** will select one, or in some cases more, design alternative(s) for further development.

### **B.** Detailed Evaluations of Alternative(s)

The **Consultant** will further evaluate each design alternative and the null alternative with specific engineering analyses and considerations. Analyses will be conceptual and limited to determining the relative suitability of each design alternative, and will include:

- Design geometry, including the identification and comparison of alignment constraints and (where applicable) justification for retaining nonstandard design features, per the <a href="https://www.design.manual">NYSDOT Highway Design Manual</a>.
- Environmental constraints and potential environmental impact mitigation measures (identified under Section 4 tasks).
- Traffic flow and safety considerations, including signs, signals, and level of service analysis for intersections.
- Structures, including bridges, retaining walls, major culverts, and building alterations (limited to establishing basic concepts, accommodating clearances and stream flow, and estimating costs). Bridge investigative work (inspection, deck coring, etc.) is covered under Section 2.
- Drainage.
- Maintenance responsibility.
- Maintenance and protection of traffic during construction.
- Soil and foundation considerations.
- Utilities.
- Right-of-way acquisition requirements.
- Conceptual landscaping (performed by a Registered Landscape Architect).
- Accessibility for pedestrians, bicyclists and the disabled.
- Lighting.
- Construction cost factors.
- Wild, Scenic and Recreational Rivers Permit Program

The **Consultant** will prepare the following drawings for each design alternative analyzed:

- 1" = 20' scale plans showing (as a minimum) stationed centerlines; roadway geometrics; major drainage features; construction limits; cut and fill limits; and proposed right-of-way acquisition lines.
- Profiles, at a scale of 1" = 20' horizontal and 1" = 4' (maximum) vertical, showing (as a minimum) the vertical datum reference; significant elevations; existing ground line; theoretical grade line; grades; vertical curve data including sight distances; critical clearances at structures; centerline stations and equalities; construction limits; and superelevation data.

• Typical sections showing (as a minimum) lane, median, and shoulder widths; ditches; gutters; curbs; and side slopes.

### 3.03 Cost Estimates

The **Consultant** will develop, provide and maintain a cost estimate for each design alternative.

The **Consultant** will update the estimate periodically and as necessary to incorporate significant design changes.

### Section 5 - Right-of-Way

### 5.01 Right-of-Way Mapping

The Consultant will provide drawings to help coordinate permanent easements with Cornell University

The Consultant will research property line information and locate the old railroad centerline along the trail corridor based on field data collected by the Town.

### **Section 6 - Detailed Design**

### 6.01 Utilities

The **Consultant** will design utility improvements to address comments from the Town. This will include new watermain and sewer lines beneath NYS Route 13 and the approach to the new bridge. A utility agreement will be prepared for the NYSDOT.

### **Section 8 - Construction Support**
